Utility Representative Signature	

 * Allow up to 8 weeks for the billing credit to be applied to your account or check to be issued after receiving completed form and required documentation.

<u>Ductless Heat Pumps in Commercial Buildings 2019 (MVP & BPA Qualified)</u>

Commercial DHP Requirements and Specifications

Qualifying applications for DHPs include those installed in commercial areas that meet the following requirements:

- The building (thermally isolated space) conditioned by the DHP have the following characteristics:
 - o Less than 20,000 square feet of conditioned floor area
 - o A construction date before 2007
 - o Individual metering by an electric utility or the ability to meter electric usage separately from other occupied adjoining building(s)
- The zone conditioned by the DHP must have the following characteristics:
 - o Electric resistance heat
 - Operation hours of at least 40 hours/week
 - No commercial kitchens, commercial refrigeration or process loads (including data or server rooms), where the total connected load is over five watts per square foot
- Installed DHPs must have the following characteristics:
 - o An inverter driven outdoor compressor unit and a variable speed fan or indoor blower
 - o Fully ductless
 - Installation per the manufacturer's specification and code by a qualified contractor

Reimbursement is \$800.00 per ton of installed outdoor unit heating capacity for each DHP unit serving a qualified indoor space. To determine tonnage, divide installed BTU capacity by 12,000 and round up or down to the nearest tenth.

Ductless Heat Pumps (DHP)

Project Information Form

For Commercial, Industrial, and Agricultural Applications

Instructions: Complete this form and submit it to the serving electric utility. Incentives are only available for retrofits; new construction projects are not eligible.

The BPA specification is based on the Consortium for Energy Efficiency (CEE) Commercial Unitary Air-conditioning and Heat Pumps Specification, last updated January 12, 2016. BPA is a member of the CEE High Efficiency Commercial Unitary Air-conditioning and Heat Pump Initiative. As part of this Initiative, BPA has adopted CEE's Tier 1 and Tier 2 convention, in addition to a part-load metric in order to focus on energy efficiency savings rather than peak energy savings. More information about CEE can be found at http://www.cee1.org/
